12pm – 1pm (EST)

11am-12pm (CST)

Presentation: According to the 2010 U.S. Census, there were 50,477,594 Latinos. The Latino population represented 16.4% of the total U.S. population. The growing Latino population is impacting many regions across the U.S. This impact can be seen with the growth in new Latino communities in the South and Midwest. The 2010 Census also revealed that there were 960 Latino majority towns in the U.S. with at least a total population of 500. This project conceptualizes two types of Latino towns: (1) The Pueblo (50% to 74% Latino) and (2) The Hyper-Pueblo (75% to 100%). There were 518 pueblos and 442 hyper-pueblos. This talk explores the demographic transitions in the pueblos and hyper-pueblos. The talk will focus on the following demographic transitions: immigration status, age structure, ethnic origin, poverty, income distribution, education, and household composition.

J.S. Onésimo (Ness) Sandoval is an Associate Professor and Director of Sociology in the Department of Sociology and Anthropology at Saint Louis University. His research interests focus on Urban Sociology, Spatial Statistics, Social-Environmental Synthesis, Racial Inequality, Spatial Demography and Criminology, and Latino Sociology.
